

TaxEase LK Pitch Guide

Practice Questions & Sample Answers

SECTION 1: HOOK + PROBLEM

Q1a: What business problem do you want to describe?

Sample: Business owners struggle with tax filing because documents are everywhere.

Q1b: How do business owners send tax documents now?

Sample: They send files through WhatsApp, email, and paper.

Q1c: What goes wrong when they do that?

Sample: Files get lost, auditors ask multiple times, and there's total chaos.

SECTION 2: WHY IT MATTERS

Q2a: What percentage of Sri Lankan businesses have this problem?

Sample: 70% of Sri Lankan SMEs have this problem.

Q2b: How much time do auditors waste looking for documents?

Sample: Auditors waste 40% of their time finding missing documents.

Q2c: What international tools exist?

Sample: QuickBooks and Xero are the main international tools.

Q2d: What's the problem with those tools?

Sample: They only work in English.

Q2e: Why is that bad for Sri Lankan businesses?

Sample: Sinhala and Tamil speakers can't use them — they're locked out.

SECTION 3: OUR SOLUTION

Q3a: What's the name of your platform?

Sample: TaxEase LK.

Q3b: What does it do? (One sentence)

Sample: A platform that connects businesses and auditors in one place to manage tax documents.

Q3c: Who uses it?

Sample: Both — businesses upload, auditors review and approve.

SECTION 4: HOW IT WORKS

Q4a: What's step 1?

Sample: Businesses drag-and-drop documents into organized workspaces.

Q4b: What's step 2?

Sample: AI automatically categorizes files and flags missing documents.

Q4c: What's step 3?

Sample: Auditors get a dashboard to review, request changes, and approve everything.

SECTION 5: UNIQUE VALUE PROPOSITION

Q5a: What's different about TaxEase LK?

Sample: It's built ONLY for Sri Lanka — not a global tool adapted.

Q5b: What languages does it support?

Sample: English, Sinhala, and Tamil support natively.

Q5c: What rules does it follow?

Sample: It follows Sri Lankan IRD tax rules.

Q5d: How does it grow?

Sample: Auditors naturally bring their clients onto the platform.

SECTION 6: TECH STACK

Q6a: What did you use for frontend?

Sample: Next JS for frontend.

Q6b: What did you use for backend?

Sample: FastAPI and Python for backend.

Q6c: What did you use for database?

Sample: Supabase for database.

Q6d: Where does it run?

Sample: AWS and Vercel for cloud hosting and scaling.

SECTION 7: YOUR CONTRIBUTION

Q7a: What did you build?

Sample: I built the frontend with Next JS, backend with FastAPI, database with Supabase, and architected the security.

Q7b: What's one key feature you architected?

Sample: I integrated the AI validation engine that automatically detects and flags missing documents.

SECTION 8: CLOSING

Q8a: What can businesses do now?

Sample: Sri Lankan businesses can now file taxes efficiently, in their own language, at local prices.

Q8b: What do you want people to remember?

Sample: We're giving local businesses the power to manage taxes properly.
