Your security score indicates room for improvement. Review the recommendations below.

Security Score

• Fair

Several issues need attention

Infrastructure & Network Information

- IP Information
- Domain & DNS
- Email Security

Email Security Records

SPF Record Configured

v=spf1 -all

DMARC Record Configured

v=DMARC1; p=reject; sp=reject; adkim=s; aspf=s;

DKIM Record Selector: default

v=DKIM1; p=

BIMI Record Not Found

BIMI (Brand Indicators for Message Identification) is optional but helps display your brand logo in email clients.

MTA-STS Record Not Found

MTA-STS (Mail Transfer Agent Strict Transport Security) helps prevent man-in-the-middle attacks on email delivery.

TLS-RPT Record Not Found

TLS-RPT is optional but provides valuable insights into email delivery issues.

DANE Records Not Found

DANE is an advanced email security feature that helps prevent certificate-based attacks.

Technology Stack

CDN 1

Vercel

Very High Confidence

SSL/TLS Certificate

Certificate is valid and trusted

Valid

A+

76d

HTTP Security

HSTS (HTTP Strict Transport Security)

HSTS Not Enabled

Consider adding the Strict-Transport-Security header to prevent protocol downgrade attacks.

🌐 HTTP to HTTPS Redirect

✅ HTTP Redirects to HTTPS

Your site properly redirects HTTP traffic to HTTPS.

Redirect Chain (2 hops):

1. 🔒 <http://manujanaranketh.vercel.app/> → 308
2. 🔒 <https://manujanaranketh.vercel.app/> → 403

⚡ HTTP Protocol Support

⊗ HTTP/3 Not Supported

Consider enabling HTTP/3 for better performance, especially for mobile users and high-latency connections.

✅ HTTP/2 Supported

Multiplexing and header compression enabled for better performance.

DNS Security

Basic configuration

DNSSEC (DNS Security Extensions)

DNSSEC Not Enabled

DNSSEC is an optional security extension that protects against DNS attacks. Consider enabling it for enhanced security.

CAA (Certificate Authority Authorization)

No CAA Records Found

CAA records are optional but recommended. They help prevent unauthorized certificate issuance.

Certificate Transparency Logs

Active certificates from transparency logs (excludes expired certificates)

Security Headers

0 of 6 security headers implemented

Headers Implemented

0 / 6

- 

Content-Security-Policy

Prevents XSS and data injection attacks

Missing
- 

X-Frame-Options

Protects against clickjacking attacks

Missing
- 

X-Content-Type-Options

Prevents MIME type sniffing

Missing
- 

Strict-Transport-Security

Enforces HTTPS connections

Missing
- 

Referrer-Policy

Controls referrer information sent to other sites

Missing
- 

Permissions-Policy

Controls browser features and APIs

Missing

Configuration Warnings

- HTTPS site without HSTS header - users vulnerable to SSL stripping attacks
- No clickjacking protection found - site can be embedded in malicious iframes

Recommendation: Implement the missing security headers to improve your site's security posture and protect against common web attacks.
